1. DECLARATION OF CONFORMITY

Decree of the Ministry of Health of the Czech Republic no. 38/2001 Coll. of 19 January 2001 Regulation (EC) No 1907/2006 - Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) Regulation of the European Parliament and Council Regulation (EC) no. 1935/2004 of 27 October 2004

The products meet the requirements of §26 of Act No.258/2000 as amended. The products meet the requirements of RoHS Directive 2015/863/EU, 10/2011, 517/2014, 2015/1094, 2015/1095.

Attention, the manufacturer gives up any responsibility in case of direct and indirect damage that is relate to poor installation, incorrect intervention or adjustments, insufficient maintenance, incorrect by using and which are eventually caused by other causes that the points referred to in the conditions sales. This appliance is intended only for professional use and must be operated by qualified by persons. Parts that have been secured by the manufacturer or authorized worker after the setting rebuild.

2. TECHNICAL DATA

The label with technical data is located on the side or back panel of the device. Please read the wiring diagram and all the following information in the attached manual before installation.

| Net Width [mm] | Net Depth [mm] | Net Height [mm] | Net Weight [kg] |
|---------------------|--------------------|------------------|---------------------------|
| 400 | 900 | 900 | 45.00 |
| Power electric [kW] | Loading | Basin volume [l] | Ratio power/volume [kW/l] |
| 13.500 | 400 V / 3N - 50 Hz | 17 | 0.80 |

3. LOCATION ELECTRIC

For the correct operation and placement of the appliance, it is necessary to observe the following all prescribed standards for the given market. Unpack the device and check that the device has not been damaged during transport. Place the device on a horizontal surface (maximum unevenness up to 2°). Small unevenness can be leveled with adjustable feet. If the device will be placed in such a way that it will be in contact with the walls of the furniture, these must withstand a temperature of up to 60°C. Installation, adjustment, commissioning must be performed by a qualified person who is authorized to perform such operations, according to applicable standards. The device can be installed separately or in series with devices of our production. A minimum distance of 10 cm from flammable materials must be observed. In this case, it is necessary to secure the appropriate modifications to ensure the thermal insulation of the combustible parts. The appliance must only be installed on a non-flammable surface or against a non-flammable wall. **Parts of the appliance provided by the manufacturer, or his representative, the worker performing the installation may not rebuild the product.**

4. SAFETY MEASURES FOR FIRE PROTECTION

- the appliance may only be operated by adults
- the appliance may be used safely in accordance with applicable market standards:

Fire protection in spaces with special risk or danger

Protection against the effects of heat

- the appliance must be placed so that it stands or hangs firmly on a non-combustible surface

Objects of flammable substances must not be placed on the appliance at a distance less than a safe distance from it (the smallest distance between the appliance and flammable substances is 10 cm).

Table: degree of flammability of building materials included in st. flammability of substances and products

| Degree of flammability | Building materials |
|--------------------------|---|
| A - non-flammable | granite, sandstone, concrete, brick, ceramic tiles, plaster |
| B - Not easily flammable | Acumin, Heraclitus, Lihnos, Itaver |

| Degree of flammability | Building materials |
|---------------------------|--|
| C1 - highly flammable | wood, hardwood, plywood, hard paper, umakart |
| C2 - moderately flammable | chipboards, solodur, cork boards, rubber, flooring |
| C3 - Highly flammable | wood fiber boards, polystyrene, polyurethane, PVC |

- information on the degree of flammability of common building materials is given in the table above. Appliances must be installed in a safe manner. During installation, the relevant design, safety and hygiene regulations must also be respected:
- fire safety of local appliances and heat sources
- fire protection in areas with special risk or danger
- protection against the effects of heat

5. INSTALLATION

Important: The manufacturer does not provide any warranty for defects arising as a result of incorrect use, failure to follow the instructions contained in the attached user manual and mishandling of appliances. Installation, modification and repair of appliances for large kitchens, as well as their dismantling due to possible damage to the gas supply, can only be carried out on the basis of a maintenance contract, this contract can be concluded with an authorized dealer, while technical regulations and standards and regulations must be observed regarding installation, electrical supply, gas connection and work safety. Technical instructions for installation and adjustment, for use by specialized technicians ONLY. The instructions that follow refer to a technician qualified for installation to carry out all operations in the most correct manner and according to the applicable standards. Any activity related to regulation etc. must only be performed with the device disconnected from the network. If it is necessary to keep the appliance under voltage, the utmost care must be taken. The type of appliance for extraction is declared on the nameplate, it is an A1 appliance.

6. NÁVOD NA PROVEDENÍ ODTAHU PLYNU

PŘIROZENÝ ODTAH

NUCENÝ ODTAH

Vyústění digestoře je do samostatného komínového tělesa (A). Odtah spalin zabezpečuje přirozený tah

komínu.

Vyústění digestoře je bez přirozeného odtahu. Odtah spalin je zabezpečován pomocí ventilátoru (D), (nucený odtah). V tomto případě je nezbytné zabezpečit propojení s přívodem plynu (B) pro vypnutí přívodu plynu při výpadku.

7. THERMAL OUTPUT CHECK

Appliances must be checked to verify their thermal power input: The heat output is marked on the label or can be found in this manual. It is necessary to verify first if the appliance is made for the same type of gas to be used and therefore if the label corresponds to the gas type label to be used. To convert to another type of gas, it is necessary to check if the type of gas marked corresponds which is recommended in this manual. The pressure is measured by the pressure gauge of the necessary sensitivity. The pressure gauge is connected to the appropriate location, so it is necessary to unscrew the screw with an airtight cap and connect the pressure gauge. After the measurement, it is necessary to screw the screw back and check its tightness.

8. CONNECTING THE ELECTRICAL CABLE TO THE NETWORK

Installation of the electrical supply - this supply must be separately secured. At with the corresponding circuit breaker of rated current depending on the power input of the installed device. Check the power consumption of the device on the production label on the back panel (or side) of the device. The connected ground wire must be longer than the other wires. Connect the device directly to the network, it is necessary to insert a switch between the device and the device with a minimum distance of 3 mm between the individual contacts, which corresponds to the applicable standards and load. The earth supply (yellow-green) must not be interrupted by this switch. Connect the device to the mains if the socket has adequate protection. In any case, the supply cable must be located so that it does not reach a temperature of 50 degrees higher than the environment at any point. Before the appliance is connected to the network, it is necessary to first make sure that:

- the supply circuit breaker and the internal distribution can withstand the current load of the appliance (see matrix label)
- the distribution board is equipped with effective grounding according to the standards of the relevant market and the conditions given by law
- the socket or switch in the supply is easily accessible from the appliance
- the electrical supply to the device must be made of oil-resistant material

We disclaim any responsibility in the event that these standards are not respected and in the event of a violation of the above principles. Before first use, you must clean the device, see chapter "cleaning and maintenance". The appliance must be grounded using a screw with a grounding mark.

- Do not insert the plug of the power supply into the electrical outlet. sockets and do not pull out the zel. sockets with wet hands and pulling on the power cord!
- Do not use extension cords or multiple sockets.
- **The mains connection point must have a maximum of the following impedance: $Z_{MAX} = 0.042 + j 0.026 \Omega$ for the phase conductors and $0.028 + j 0.017 \Omega$ for the neutral conductor.**

9. INSTRUCTIONS FOR USE

Pozor! Než-li začnete přístroj používat, je nutné z celého povrchu sejmout ochranné fólie, a pak jej dobře omýt vodou se saponátem na nádobí, a poté otřít vlhkým hadrem.

Nikdy nenechte přístroj v chodu bez dozoru.

Nikdy nezapínejte přístroj bez oleje nebo pokud je hladina oleje pod ryskou minima existuje nebezpečí požáru. Pokud je olej znečištěn nebo jej používáte delší dobu hrozí překypění oleje.

Po připojení zařízení k síti se ujistěte, že topné těleso je v pracovní poloze (obr. 1). Pokud je topné těleso otočeno do svislé polohy, není možné zařízení uvést do provozu (obr. 2). Naplňte přístroj olejem vhodným ke fritování až po rysku maxima na boční straně. Zapněte hlavním vypínačem el. přívod, ovladačem (A) nastavte na vámi požadovanou hodnotu v rozpětí 50°C - 190°C. Kontrolky (B) a (C) budou svítit. Kontrolka (B) svítí, když je přístroj pod el. proudem. Kontrolka (C) svítí, pokud jsou v chodu tepelné spirály. Kontrolka (C) zhasne, když je přístroj nahřátý na nastavenou teplotu. Přístroj vypnete, otočením ovladače (A) do polohy „0“.

DRAINING THE TUB

Drain the tub when the oil is cold and the appliance is unplugged. The user must provide a suitable container for draining the oil from the tub. This container must be made of heat-resistant material and must be constructed so that the oil will not splash and thereby cause a hazard. Insert the drain tube, remove the lock against accidental opening upwards and move the lever to the position marked with the open tap. Drain the tub if the oil is cold.

In some types of fryers, the oil is drained into a container located in the base. Turn the lever to the position marked with the open tap. Drain the tub if the oil is cold.

Notes and recommendations

Always check the oil level, never use the machine without oil. Use the device only under supervision. We add oil up to the GN line, which indicates the maximum amount. The fryer may overflow if the oil in the container contains water.

10. CLEANING AND MAINTENANCE

It is recommended to have the device checked with a specialist service at least once a year. All the interventions in the device can only be carried out by a qualified person who has the authorization to do so.

CAUTION! The device must not be cleaned with direct or pressure water. Clean the equipment daily. Daily maintenance extends the life and efficiency of the equipment. Always turn off the main inlet to the device. Wash the stainless steel parts with a damp cloth with a detergent without coarse particles and wipe dry. Do not use abrasive or corrosive cleaning agents. Attention! Before using the device, it is necessary to remove the protective foil from the entire surface, and then wash it well with water with detergent, and then wipe it with a damp cloth. **ALERT!** The warranty does not apply to all consumables subject to normal wear (rubber seals, bulbs, glass and plastic parts, etc.). The warranty also does not apply to the device if the installation is not carried out in accordance with the instructions - an authorized worker according to the corresponding standards and if the equipment was unprofessionally manipulated (interventions in the internal equipment, etc.) or were operated by unhappy staff and contrary to the instructions for use, further The warranty does not apply to damage by natural effects or other external intervention. **Required service organization 2 times a year. After the lifetime, the shipping packaging and equipment are submitted to the collection, according to the regulations on waste management and hazardous waste.**

11. ODSTRAŇOVÁNÍ ZÁVAD

| Závada | Možná příčina | Doporučené řešení |
|-----------------|----------------------------|---|
| fritéza nehřeje | vypadlý pojistný termostat | pod předním panelem pod membránou zkuste zmáčknout, zda není vypadlý pojistný termostat. V případě že bude vypadávat opakovat, nutno volat servis |

| Item number | Item description |
|-------------|---|
